

Intermediate Microeconomic Analysis

EconS 302

Please see below course objectives and student learning outcomes. Instructors will provide a full Syllabus at the beginning of the course.

Course Objectives:

We will discuss the behavior of important aggregate economic variables, such as income, consumption, inflation, unemployment, interest rates, etc. We will study theory and models to investigate relationships between these variables. We will then use these models to understand historical and current economic trends, role of government, and policy implications.

Student Learning Outcomes:

At the end of this course, the student should be able to:

1. Describe the state of the U.S. economy using key aggregate economic variables.
2. View the economy as a whole of interconnected parts.
3. Explain relationships between the macroeconomic variables using theory and models.,
4. Apply this knowledge to critically analyze the current economic situation.
5. Discuss fiscal and monetary policies.
